**PATIENT NAME:**

Dear Future Patient,

**ACCOUNT #:**

**APPOINTMENT DATE:**

**TIME:**

We appreciate your interest in our digestive health and wellness program, and we would like to welcome you to our specialty practice. Our patients often have chronic digestive problems that need intensive time and effort to evaluate and treat comprehensively, without Managed Care short-cuts. Taking time to listen and create a comprehensive and holistic care plan is what differentiates our care. Our philosophy is to “do it right” and not to simply click a box.

In a medical world gone awry the physician-patient relationship has gotten lost in the rush of today’s health care shuffle, EMRs, and data collection. Without that relationship patients are left confused and scrambling. At PostRx Healthcare we aim to make that relationship the foundation for trust and improved health.

We realize that there is something fundamentally wrong with our nation’s medical care system when many physicians feel trapped in the grasp of “corporatized” medicine, but powerless to “change the system”. We have chosen another path. Understanding that we cannot change the system, we realize we can only change how we practice medicine. We have broken away from all managed care plans, see fewer patients and spend more time with each patient. Rather than handing over what little control we have left over the patient care environment to others, we have taken back complete control and designed treatment protocols with nothing but the patient’s interest in mind. It is our practice to recommend only what is best for you, not what is best for your insurance company.

We offer our patients time...for education and advocacy. Please know that you will not be rushed, and all of your questions will be answered. We will take time to research and create a comprehensive treatment plan. And, we expect our patients to be active participants in reviewing and preparing for office visits.

Your first visit will include a thorough history and data review. If any tests are ordered, these will be done at a later date and our scheduling secretary will make this appointment for you. Subsequent labs will be ordered prior to office follow-up in order to facilitate discussion.

OUR MISSION, simply stated, is to maintain a medical practice environment in which we can treat you the way we ourselves would like to be treated. We believe that the importance of a patient’s trust in their physician should form the basis of the patient physician relationship...the foundation for good health.
